C; Comment: This protein is associated with the differentiation of reticulate bodies into It may also be an important virulence factor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          A;Residues: 1-556 <2TO>

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 2, Sequence 2, Sequence 6, Sequen

A; Title: Primary structure of three distinct isoabrins determined by cDNA sequencing. CA

A; Reference number: S32429; MUD: 9313798; PMID: 8421313

A; Accession: S33429

A; Status: nucleic acid sequence not shown

A; Molecule type: mRNA

A; Residues: 'E', 2-528 *HUN>

A; Cross-references: UNIPROT: P11140; GB:M98344; NID: 9166294; PIDN: AAA32624.1; PID: 9166295

A; Note: the coding region for the sequence shown is preceded by an ATG codon

A; Note: residues 1-8 were derived from the synthesized primer

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   MEDLINE=94139756; PubMed=8307038; MEDLINE=94139756; PubMed=8307038; MEDLINE=94139756; PubMed=8307038; MEDLINE=94139756; PubMed=8307038; Lin J.Y.; Lin J.Y.; Chih-Hung H., Lee M.C., Chen J.K., Lin J.Y.; Chains and their mutants and expression of three abrin A-chains and their mutants derived by site-specific mutagenesis in Escherichia coli."; Luc. J. Biochem. 219-397(1994).

-I. CATALYTIC ACTIVITY: Endohydrolysis of the N-glycosidic bond at one specific adenosine on the 28S FRNA.

-I. SIMILARITY: Belongs to the ribosome-inactivating protein family. HSSP; P11140; LABR.
                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               UPEB-1997 (TrEMBLrel. 02, Created)

SENERAL INFORMATION:
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO STAPHYLOCOCCUS
TITLE OF INVENTION: BEIDERMIDS FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: BEIDERMIDS FOR DIAGNOSTICS AND THERAPEUTICS
CURRENT PELICAN NUMBER: US 60/064,964
PRIOR APPLICATION NUMBER: US 60/064,964
PRIOR PILING DATE: 1997-08-14
NUMBER OF SEQ ID NOS: 5674
SEQ ID NO 3124
LENGTH: 297
                                                                                                                                                                                                                                                                                                                                                                                                           RESULT 3
